

Steel Service Centre invests in Bystronic

L to R: Dave Larcombe, head of Bystronic UK Operations, Austin Jarrett, managing director Steel Service Centre and Lawrence Cairns, Bystronic Pullmax.

Steel Service Centre has placed an order with Bystronic UK for a Bystronic Byspeed 3015 with 4.4 kW resonator, sheet loader and Byteam software. It is the fourth Bystronic laser SSC have purchased since 2000 and represents an overall investment of over £1.75M.

“We were first in the UK to invest in the Bytube laser in 2003,” said MD Austin Jarrett. “We encouraged customers to redesign their products in order to benefit from its capabilities and now laser tube cutting is our fastest growing business. Likewise with the Byspeed 3015, we want to encourage those currently using punching technology to reap the benefits of high speed laser cutting.
